ABOUT US.

At Save Time Concrete, we provide a variety of products and services that have helped us win the hearts of numerous customers. This is a result of the excellent customer service we offer and the amiable, humble, and helpful attitude of our skilled, experienced staff, who are unavoidably required to field calls from customers seeking our goods or eager to learn more about us. Our company's name accurately captures who we are. Save time refers to the fact that we enable our clients to complete their projects in comparably less time thanks to our quick haulage (delivery). Having years of expertise in this field, we are able to provide our clients with accurate information as well as any special supplies they might need for the highest quality work in construction

ONSITE MIX SCREED

At Savetime Haulage, our experienced team will assess your project requirements and recommend the appropriate aggregate mix, as well as the correct water content, to ensure that you have a quality screed that meets your requirements. The onsite mixed screed will be a bespoke mixture tailored to your exact needs, so you can rest assured that you have the right mix to suit the job. Our onsite mixed screed is suitable for a range of applications, including flooring, underfloor heating, driveways, patios and pathways. It can also be used in landscaping, as a bedding layer for paving, as well as for external rendering. Onsite mixed screed is a flexible and cost-effective solution for larger projects, as it can be mixed and poured onsite, reducing transportation costs and eliminating the need for mixing by hand.

ADVANTAGES OF ONSITE MIXED SCREED

1. Quick turnaround times – Onsite mixed screed can be mixed quickly and efficiently onsite, allowing for a much quicker turnaround time than traditional screed delivery.
2. Cost-effective – Onsite mixing eliminates the cost of delivery, allowing for a more cost-effective solution for your project
3. Quality – Onsite mixing allows for the screed to be mixed onsite to a specific strength, as well as ensuring it is mixed to the correct consistency for the project.
4. Flexibility – Onsite mixing allows for the screed to be mixed to a specific strength and consistency, allowing for more flexibility in the project.
